

Inspection Report V-1201 — Shell Thickness Survey March 2023

1. Equipment Details

Equipment: V-1201 Crude Feed Surge Drum. Design pressure 18.0 barg. Material SA-516 Gr.70. Nominal shell thickness 14.0 mm.

2. Thickness Survey

Measurements at the six established condition monitoring locations. CML-04 on the bottom shell measured 12.50 mm, down from 13.90 mm in 2019. All other locations remain above 13.00 mm.

3. Findings

General corrosion is uniform and within expectation. The bottom shell shows a higher rate than the upper courses. No repairs required at this inspection. Next survey due 2029.

4. Sign-off

Inspected by: S. Nair, Senior Inspection Engineer. Date: 2023-03-11.
